

I am a paying subscriber of XM Satellite radio and have been VERY pleased to see that they have added traffic and weather in addition to a host of tremendously good music, news, and programming. Much of this materially is not available elsewhere.

I urge you to REJECT the NAB's petition 04-160 in which they are trying to stop the ability of XM to carry traffic and weather.

I fully support XM Satellite Radio's ability to bring me this important programming and think it is an outrage that the National Association of Broadcasters is trying to stifle and gag my getting useful content via satellite radio.

The best interests of all consumers are served by enabling people to get traffic, weather, and programming via XM, Sirius, and other such services.

Again, please REJECT the NAB Petition of 04-160 and enable satellite radio to best serve the needs of consumers and subscribers such as myself.

Many thanks,

- ERIC -
